Contact: ccsc@ioes.ucla.edu

**First of its kind interactive web
Atlas that provides access to the
largest and most disaggregated
building energy data
available in the nation.**

SB 350

Increases California's renewable electricity procurement goal from 33% by 2020 to 50% by 2030.

AB 758

Requires the state to double statewide energy efficiency savings in electricity and natural gas end uses by 2030.

AB 802

Energy-use benchmarking and disclosure program.

Prop 39

Energy Efficiency in K-12 Schools

The Atlas is a tool for local governments!

- Fills gap between policy requirements, program aims, funding opportunities and implementation
- Provides ability to quantify need, target programs, and evaluate results
- Provides granular data aggregated to meet PUC regulations to protect customer privacy
- Useful for implementing:
 - state legislation
 - local conservation
 - efficiency and GHG reduction goals
 - improving building performance and quality of life
 - environmental justice concerns
 - implementing CCA/CCE programs

www.energyatlas.ucla.edu

Raw Utility Data

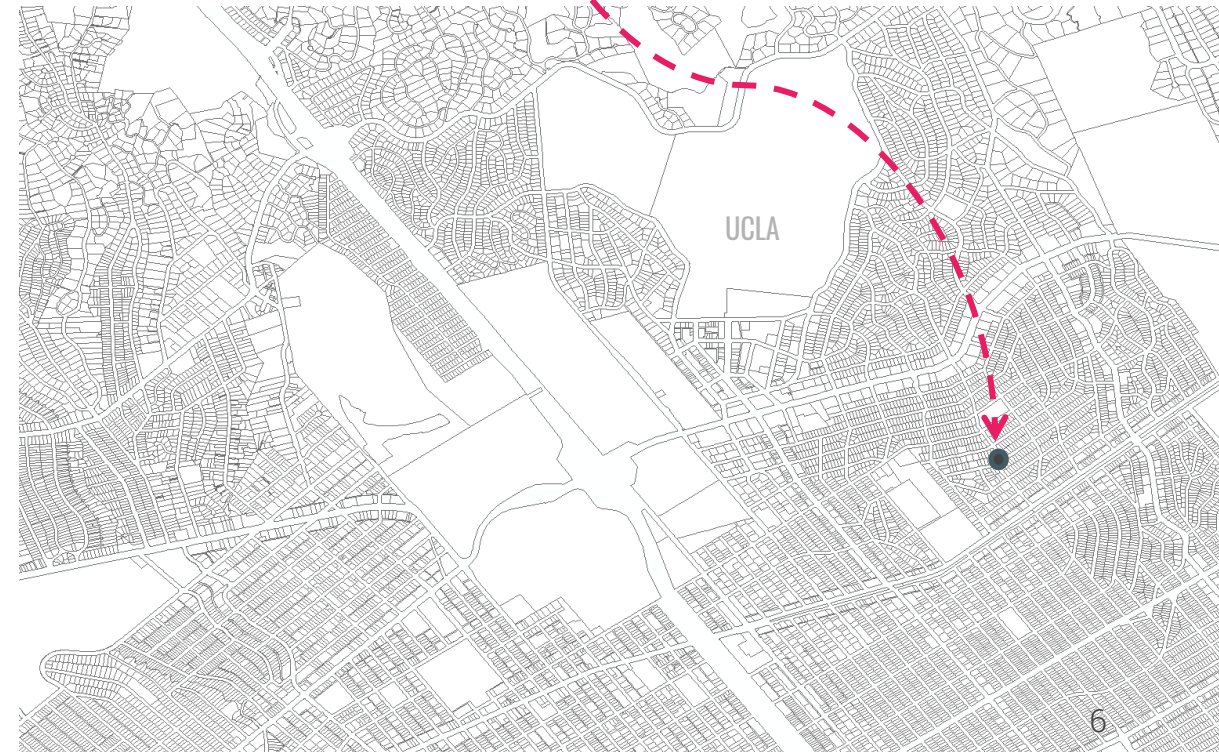

Account ID	Billing Address	Energy Consumption
9876543421	1234 Example St., Los Angeles	xx (kWh & therms)

Mapped to parcel-level

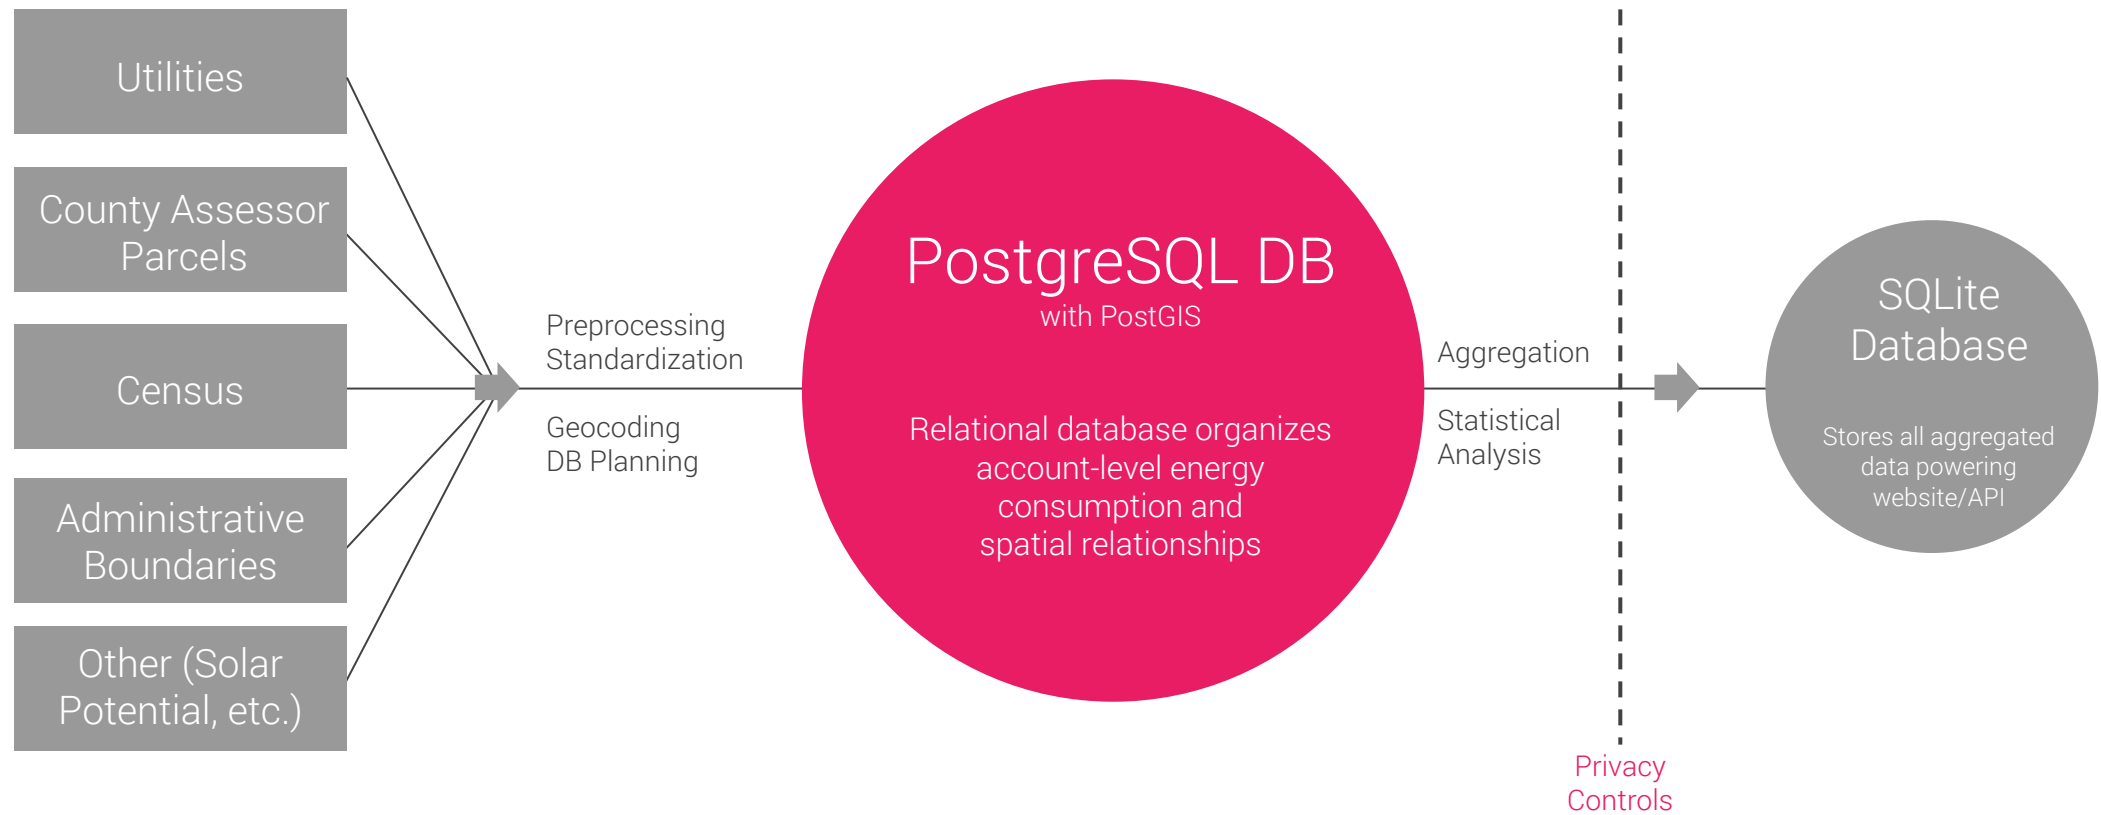

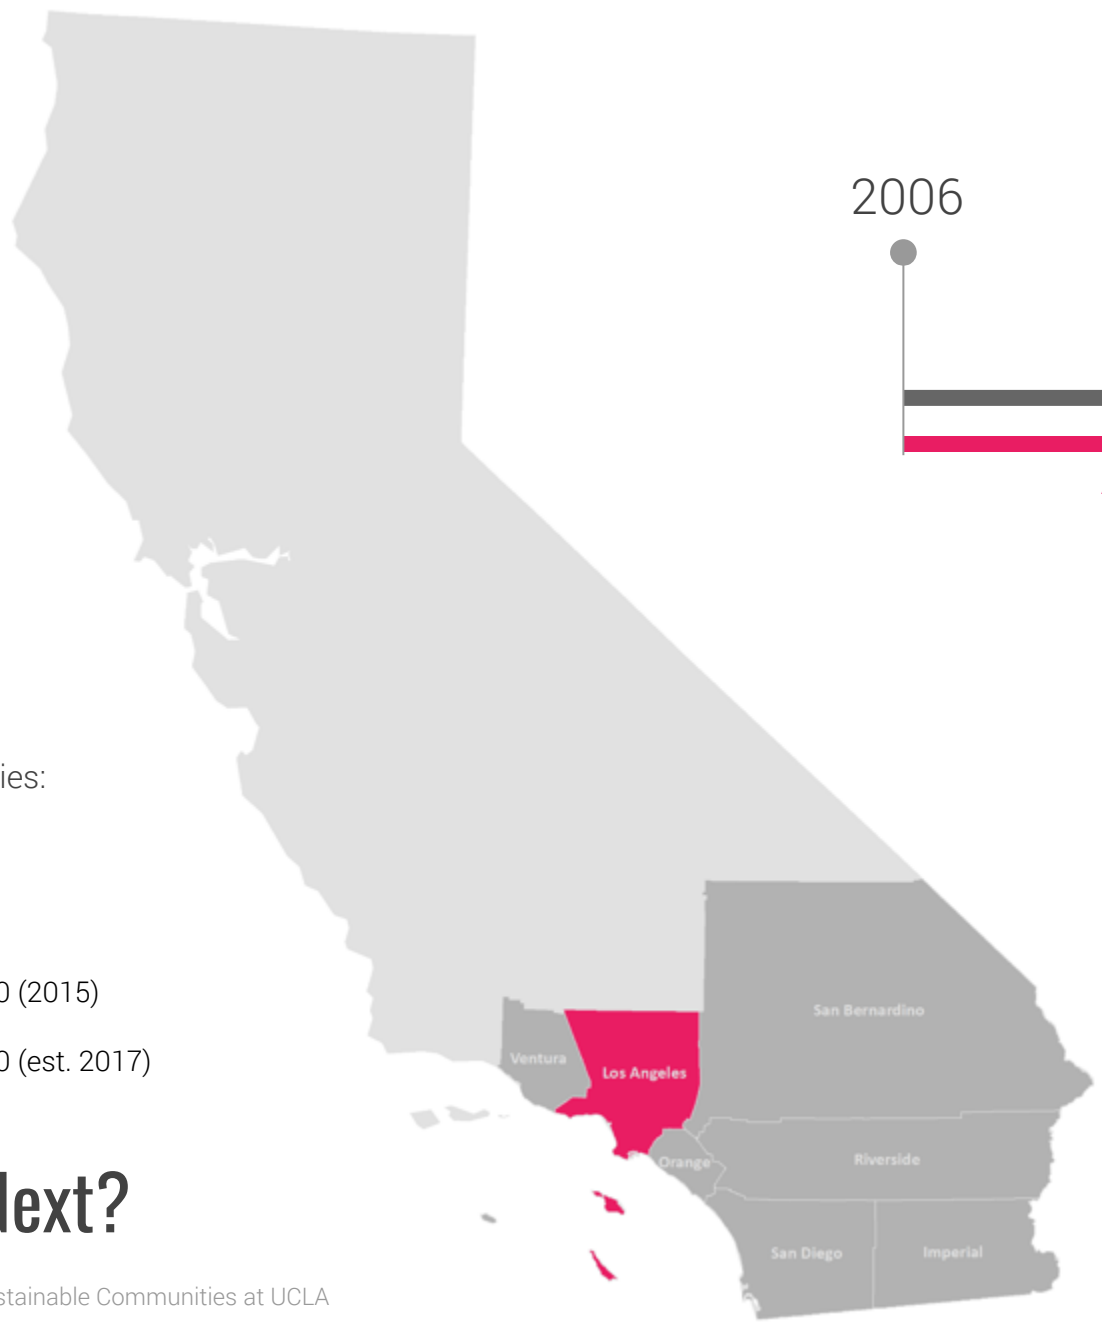

UCLA has mapped **27+ million** raw utility addresses to the parcel level. This allows for energy consumption to be analyzed by:

- Parcel data (sqft, vintage, use type)
- Census characteristics
- Any geographical aggregation beyond parcel (block groups, neighborhoods, council districts, etc.)

Database Development

Energy Efficiency
Program Data

What's Next?

The Energy Atlas provides data for critical research and planning.

1. Advanced Energy Communities
2. Energy Efficiency Program Evaluation
3. Solar Potential/Prioritization

Advanced Energy Communities

- \$1.5M planning grant
- California Energy Commission
- Accelerate deployment of “Advanced Energy Communities”
- Disadvantaged category

Team

- The County of Los Angeles/SoCal Regional Energy Network
- The Energy Coalition
- Day One, a community outreach group serving the San Gabriel Valley

Advanced Energy Community (AEC) Desired Characteristics

- Affordable access to renewable energy generation / EE
- Energy savings and GHG emissions reductions
- Improved health, comfort, and standard of living
- Improved reliability / resiliency
- Minimize grid impacts / support grid reliability
- Financially attractive
- Scalable and replicable

Key Planning Questions

1. To what extent can a community's energy needs be met from rooftop and or/community solar gardens?

Key Planning Questions

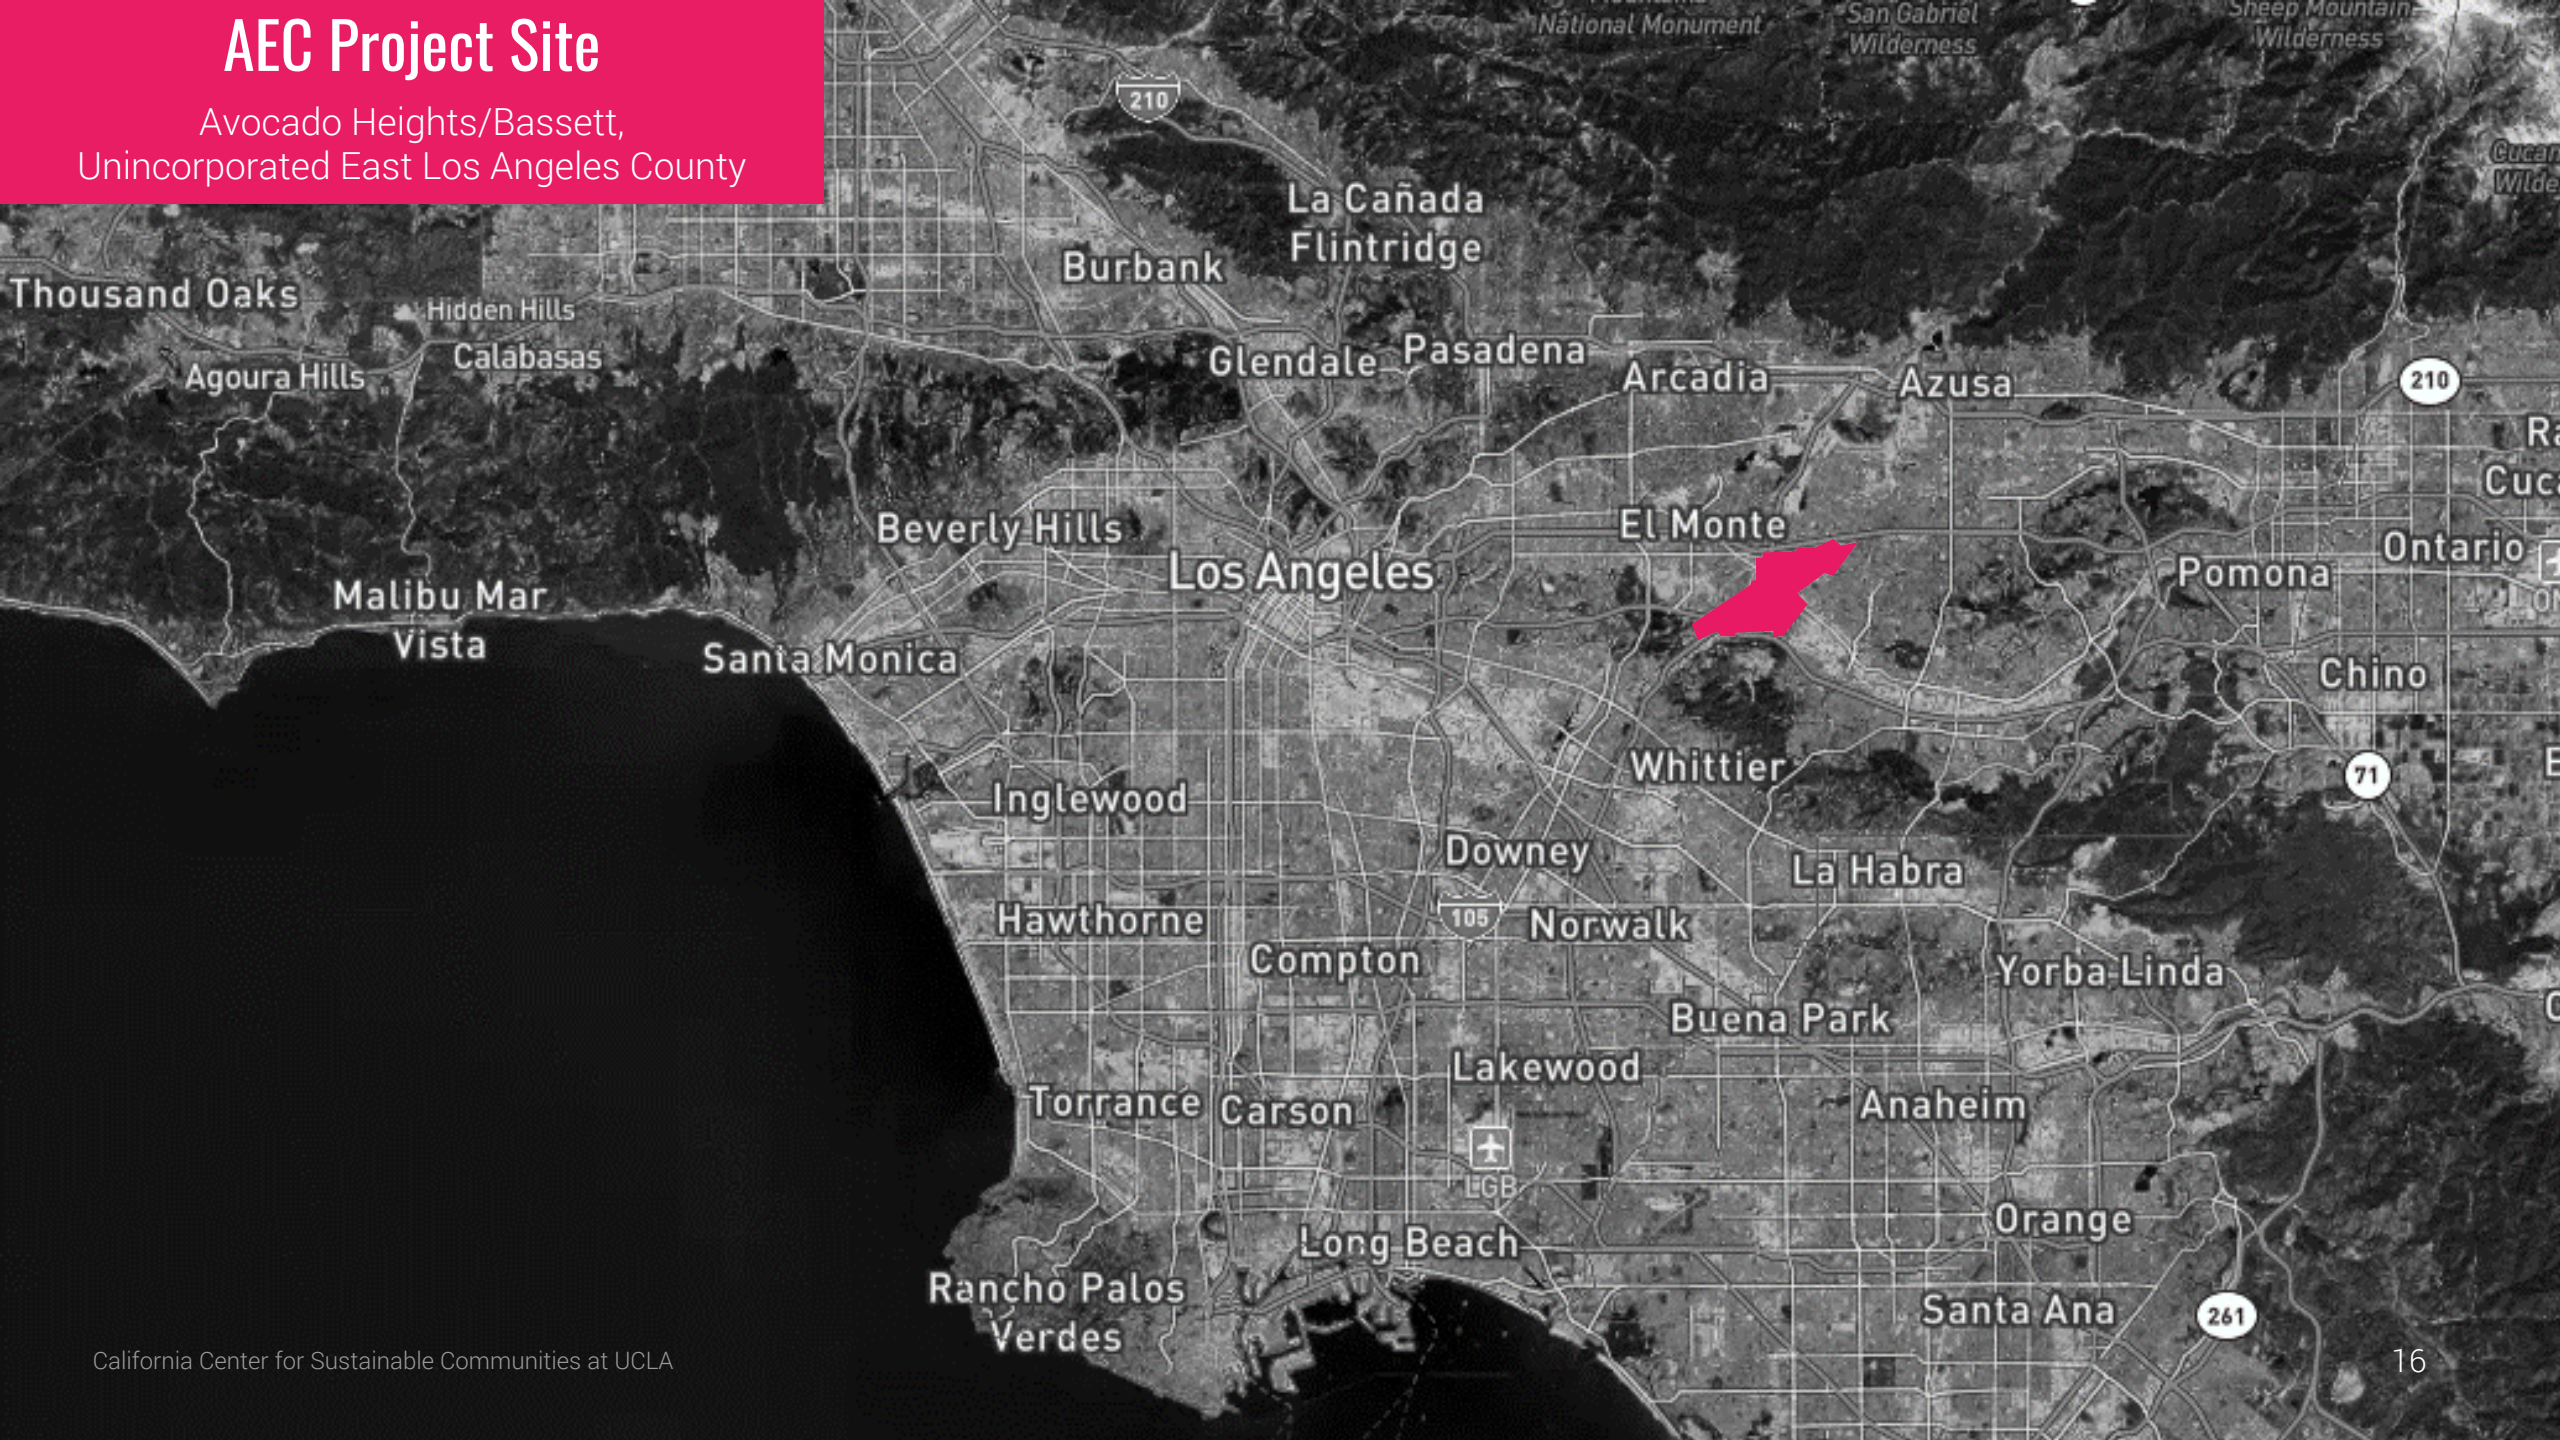

1. To what extent can a community's energy needs be met from rooftop and or/community solar gardens?
2. What has been the effectiveness of utility energy efficiency programs ?

Key Planning Questions

1. To what extent can a community's energy needs be met from rooftop and or/community solar gardens?
2. What has been the effectiveness of utility energy efficiency programs ?
3. How can we guide municipalities in prioritizing disadvantaged neighborhoods for investments in AECs?

AEC Project Site

Avocado Heights/Bassett,
Unincorporated East Los Angeles County

AEC Project Site

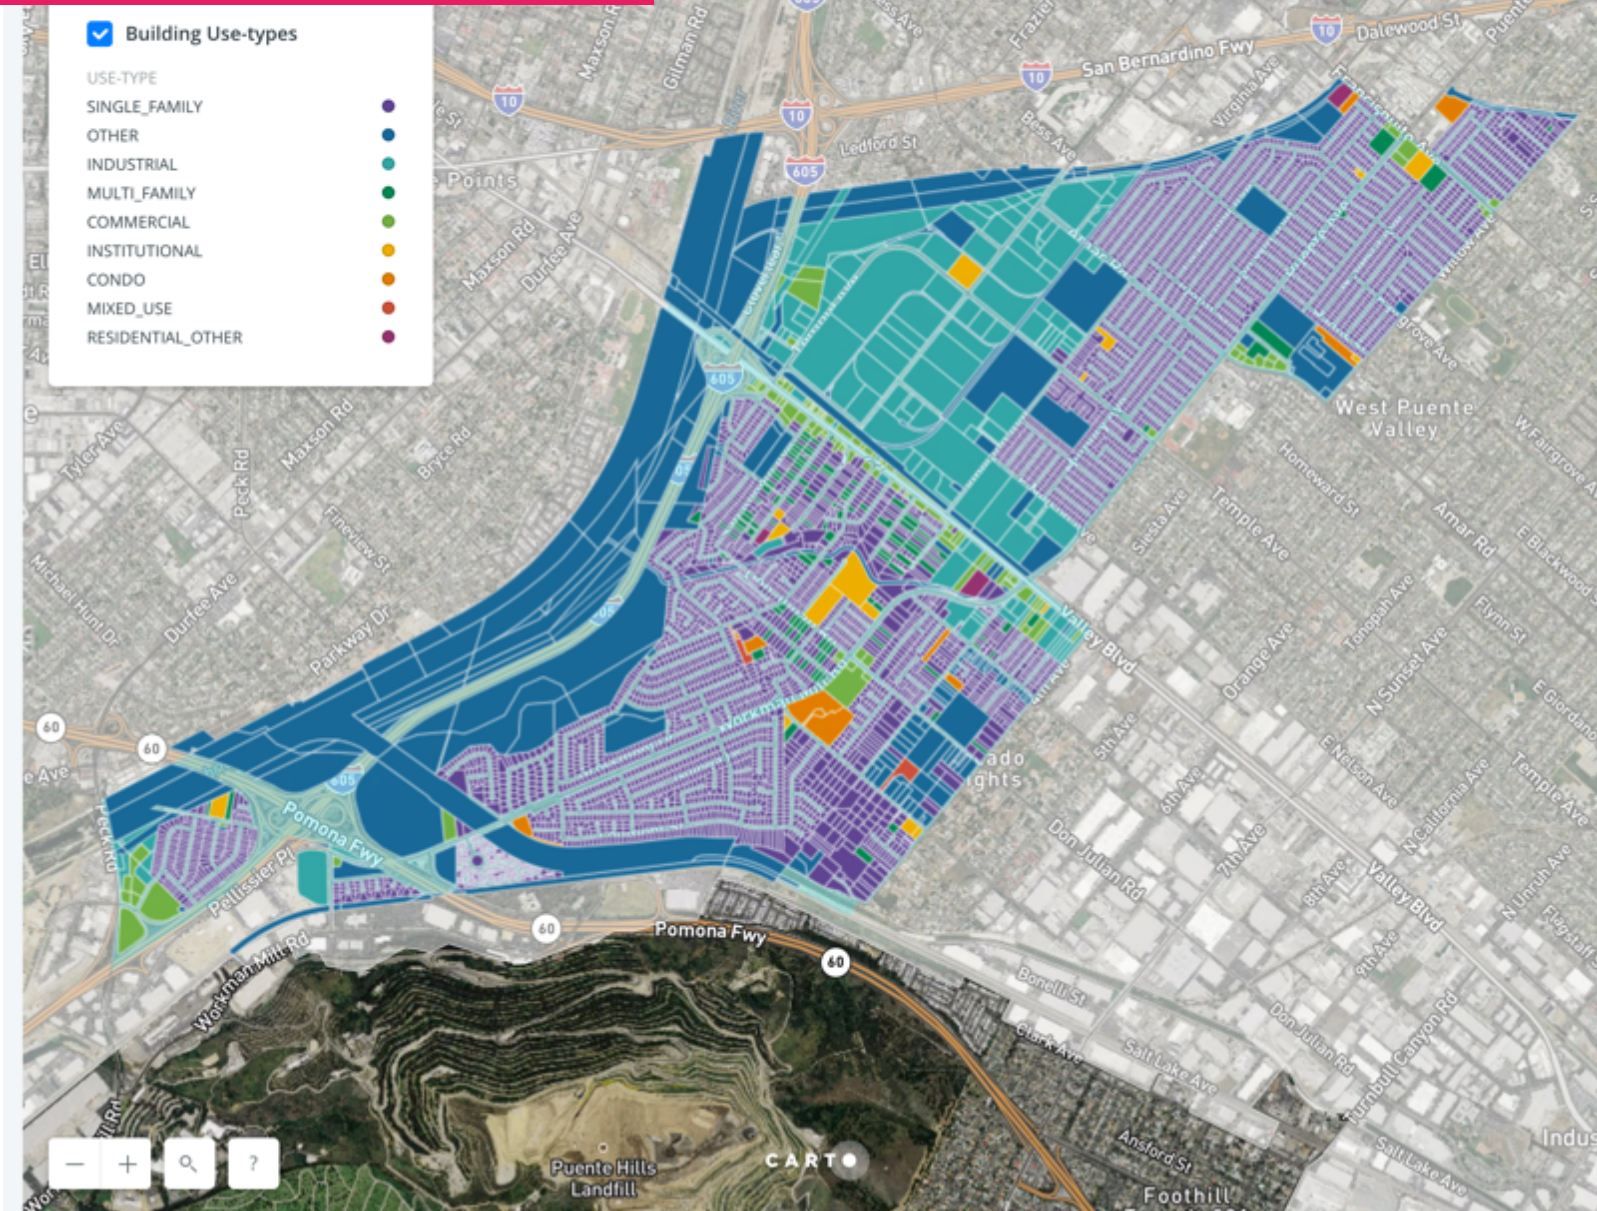

Avocado Heights/Bassett,
Unincorporated East Los Angeles County

- Top 10% of disadvantaged communities under CalEnviroScreen
- >40 additional extreme heat days per year by 2050 predicted
- 4.7 sq-mi
- Population of ~28,000
- Bordered by 3 major freeways
- Adjacent to La Puente Landfill
- Nearby Quemetco Battery Recycling Facility (lead, arsenic)

AEC Project Site

Avocado Heights/Bassett,
Unincorporated East Los Angeles County

Sectoral Energy Consumption Time Series Comparison

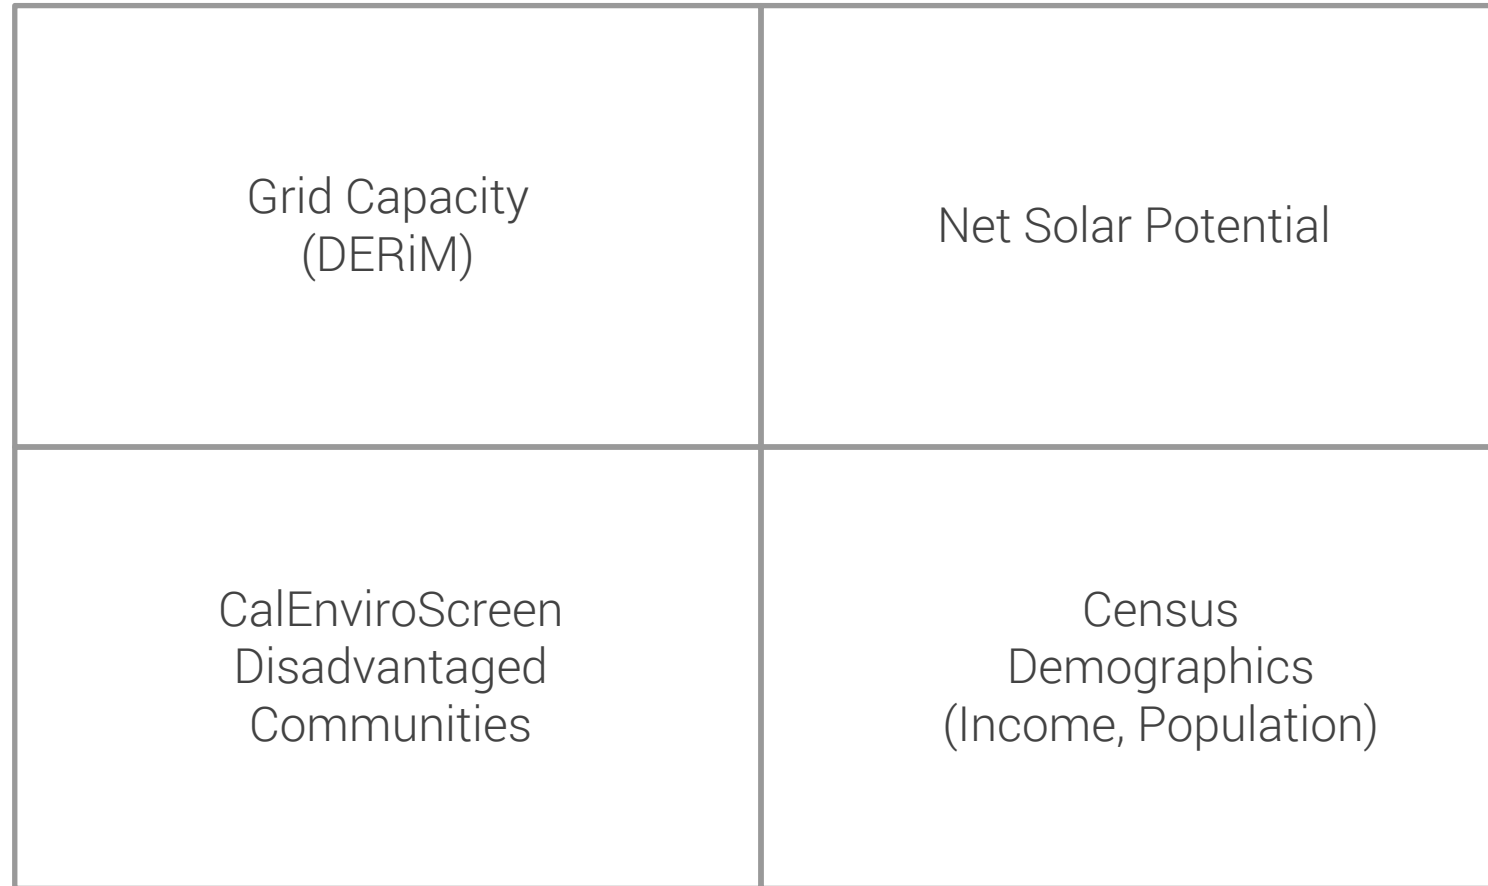

Effectiveness of Energy Efficiency Programs

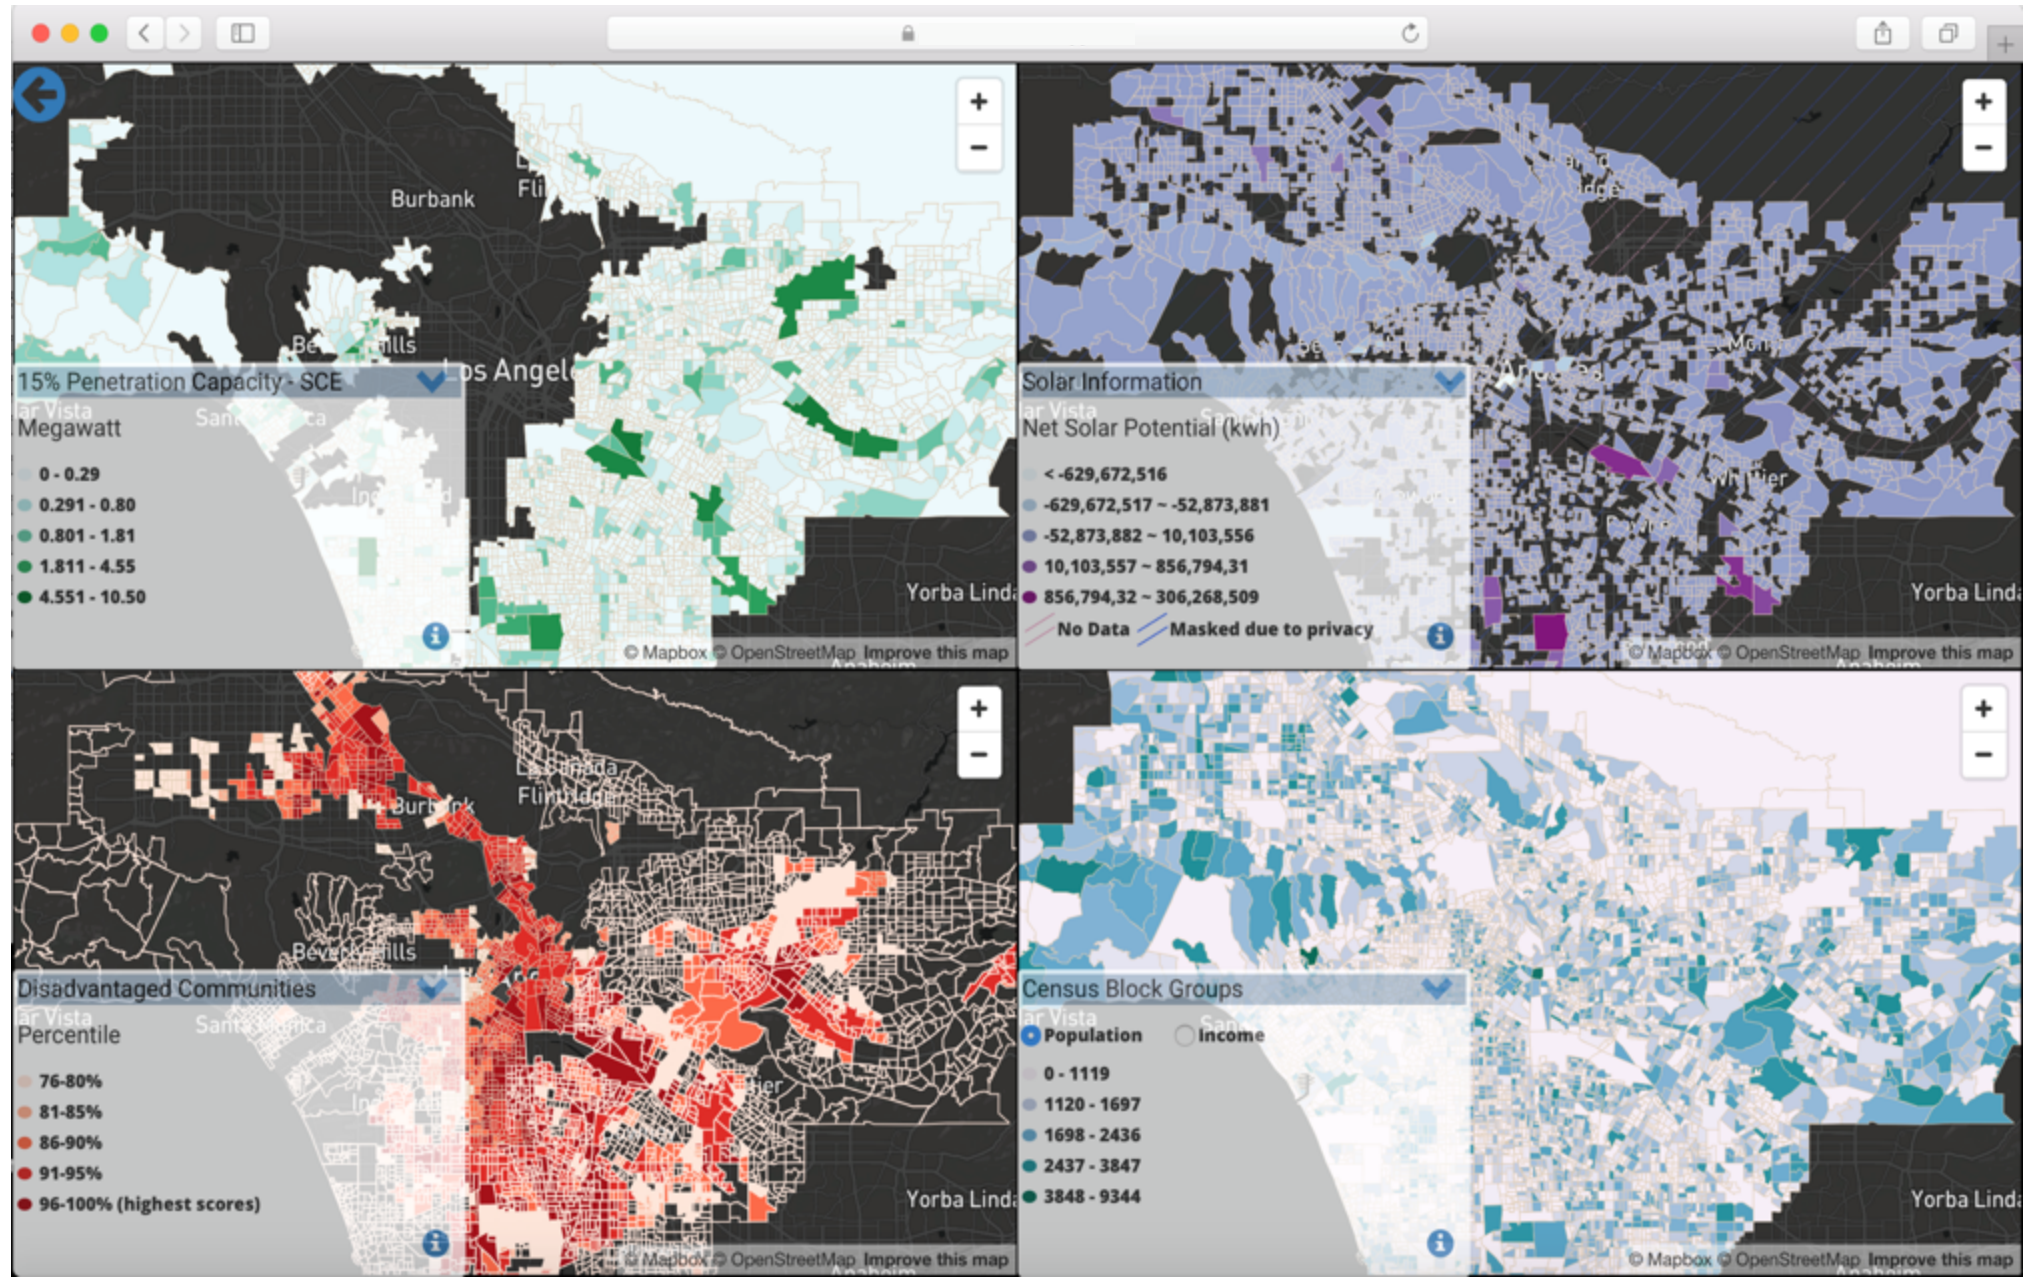

- \$1 BILLION spent annually in CA on building energy efficiency upgrades
- The Energy Atlas is allowing us to conduct the first analysis of actual usage data on a large geographic scale and granularity.
- Data from SCE
 - EE programs from 2010-2015
 - CARE data from 2010-2015
- **10+ million** unique residential accounts
 - Monthly electricity (kWh) consumption data
 - 6 Counties in Southern California
- With the Atlas, we are able to control for:
 - Building characteristics (size, vintage, use type)
 - Socio-economic data (census and CARE)
 - Climate
 - Etc.

Where to Install Solar? A Spatial Prioritization Tool

Integrating data sets: Grid capacity (DERiM),
Net solar potential, Demographics

Where to Install Solar? A Spatial Prioritization Tool (In Development)

Thank You
