

IT TAKES A VILLAGE

Profiles on communities coming together to rise against climate change

"Climate change is real, and it's happening right now. It is the most urgent threat facing our entire species and we need to work collectively together..."

-Leonardo DiCaprio

QUICK FACTS

- Collective action can have the greatest impact on mitigating climate change.
- Climate change is accelerating.
- The record high temperatures have increased and are seen during extreme weather events.
- People living in vulnerable areas, coastal communities, and some ocean islands may need to relocate.
- Continued warming of the planet could affect the geographic range of temperature-limited diseases.
- Heat waves could cause more deaths to very young, very old, and those without access to air conditioning.

97/100

SCIENTISTS

think humans are changing global temperature

<12

YEARS

to avoid potentially irreversible climate disruption, according to the Intergovernmental Panel on Climate Change

1.5°C

DEGREES

change in average temperatures could trigger lasting changes for the planet
