Sourcing Sustainability
A guide to third party evaluation services

There is a proliferation in companies addressing environmental, social, and governance criteria. 90% of CEOs express that engaging in sustainability is essential for success and 85% of Fortune 500 companies produced a sustainability report in 2017. As companies look to increase overall sustainability, their supply chains are a critical component. The supply chain of a typical consumer company accounts for more than 80% of their greenhouse gas emissions and over 90% of impact on environmental resources.

Among companies that voluntarily report their emissions to CDP, a not-for-profit organization dedicated to advancing transparency of environmental impacts, just 23% of them claim to be engaging their suppliers. This leaves a sizeable portion of the global supply chain available for substantial development with overlooked emission reductions and untapped financial savings.

Some of the leaders in supply chain sustainability include Walmart, Nike, and L’Oreal which each have internal programs they use to engage with their supply chains. But what about smaller companies? They have smaller staffs and less resources so what options exist for them...

Third party companies can offer support. The researchers talked to companies to understand what services they could contract for to help with their supply chain sustainability considerations. Four categories emerged:

ISO Certifications
ISO certification means a standard of practices is followed for a particular management system

CSR Strategy
Companies pursuing sustainability reporting can hire third parties to provide strategy and framework

Audits
Audits are conducted by third parties to assess labor practices, environmental quality, and corruption

Supply Chain Management Software (SCM)
SCM documents supplier relationships, tracks compliance, and provides metrics

Case Studies

Notable Takeaways

The ISO standards that most directly tie to sustainability are ISO 9001 and ISO 14001

59% of companies that published a sustainability report in 2016-2017 used the GRI guidelines

Supply chain issues can be identified within the company itself or with suppliers under contract

The top 10 SCM companies total over 830,000 customers internationally
